PROFESSIONAL PROFILE

Full-Stack Developer and Project Manager with intensive self-directed training since 2020, focused on building real digital products: web platforms, administrative systems, APIs, process automation, payments, authentication, databases, dashboards, operational modules, and applied artificial intelligence solutions. I combine technical execution with product vision, leadership, autonomy, and fast learning. I have worked on projects across education, medical transportation, real estate, service businesses, hackathons, academic innovation, SaaS, and personal products focused on AI, data, productivity, and automation.

VALUE PROPOSITION

- **I build end-to-end solutions:** frontend, backend, database, authentication, business logic, admin panels, deployment, and documentation.
- **I understand the product before writing code:** I gather requirements, translate real problems into functional modules, and prioritize deliverables that create measurable impact.
- **I have hands-on experience with systems for real users:** public education, patient transportation, real estate, services, orders, and internal business platforms.
- **My current path focuses on Data Science, Machine Learning, Big Data, and AI applied to products**, while maintaining a strong full-stack development foundation.

TECHNICAL SUMMARY

Area	Technologies, Tools, and Capabilities
Frontend	HTML, CSS, JavaScript, TypeScript, React, Next.js, Astro, Sass, Bootstrap, responsive interfaces, landing pages, web panels, and user experience.
Backend & APIs	Node.js, Express, C#/.NET, ASP.NET, Spring Boot, FastAPI, REST APIs, modular architecture, business logic, validations, internal services, and endpoints for AI/ML systems.
Databases	MongoDB, SQL Server, PostgreSQL, Prisma ORM, Mongoose, data modeling, queries, relationships, persistence, and structure design for real products.
AI, Data & ML	Python, Pandas, Data Science fundamentals, Machine Learning, data analysis, model APIs, transcription, diarization, automation, and recommendation/interpretation engines.
Mobile & SaaS	React Native/Expo, Supabase, RevenueCat, App Store Connect/TestFlight, Google Play Console, Paddle, PayPal, freemium/pro models, and subscription flows.
DevOps & Tools	Git, GitHub, Docker, Render, Vercel, Azure Blob Storage, deployment, environment variables, version control, technical documentation, and issue management.
Security & Business Systems	Authentication, authorization, JWT, roles, admin panels, revenue control, payments, pricing rules, operations, reports, and traceability.

PROFESSIONAL EXPERIENCE

Project Manager & Full-Stack Developer | On The Clock Transportation | 2025 - Present | Remote / United States

- Lead and develop a digital platform for a company providing patient transportation, medication delivery, and stretcher services, combining product management, technical coordination, and full-stack execution.
- Work on public and administrative modules for service requests, operational control, tracking, distance logic, fare rules, revenue control, and payment flows.
- Participate in functional decision-making: feature prioritization, requirements definition, process validation, business adjustments, and improvement of the end-user experience.
- Contribute to transforming operational processes into clearer, measurable, and scalable digital flows for administration, customers, and internal operations.

DEMONSTRATED CAPABILITIES

- Product management, full-stack development, backend, APIs, payments, business rules, operations, administrative control, and stakeholder communication.

Full-Stack Developer / Maintenance | Se Va Negocios / Multi-Service SRL Company | 2025 - Present | Dominican Republic

- Built and maintain a business platform for a company with multiple service lines: real estate, advisory services, financial management, loans, sales, office furniture, business equipment, home furniture, and vehicles.
- Developed request forms, property/service management, administrative panel, revenue control, and modules designed to organize commercial operations.
- Applied business logic to centralize information, improve lead capture, and support internal management across multiple business areas.

Project Manager & Backend Developer | EduVisor | 2025 | Educational District 10-03 / Ministry of Education

- Led the planning and development of a web platform to digitize school visits performed by educational technicians, including evidence registration, photos, documents, reports, and deadlines.
- Worked on requirements gathering, system design, team coordination, backend architecture, user roles, visit tracking, and report structure.
- The project aimed to eliminate manual processes, improve visit traceability, and support monitoring for technicians, coordinators, and district leadership.

FREELANCE PROJECTS & CLIENT SOLUTIONS

Digital Solution for Orders and Commercial Presence | Yira's Gourmet | Freelance | 2025 | Dominican Republic

- Developed a digital solution for a made-to-order food business, focused on presenting services, facilitating requests, organizing orders, and improving the customer experience.
- Focused on web presence, contact/request flows, commercial clarity, and a scalable structure for made-to-order food operations.

Real Estate Digital Presence / Platform Maintenance | Scada Inmuebles | Freelance | 2025 - Present | Dominican Republic

- Project for a real estate company, focused on property presentation, client acquisition, information organization, support for commercial processes, and ongoing maintenance.
- Designed to improve the brand's digital visibility, structure services clearly, and convert user inquiries into commercial opportunities.

PERSONAL, ACADEMIC, AND INNOVATION PROJECTS

EduNova | Hackathon for Rights - Dominican Ombudsman | 2026 | *Idea conceived in 2025 | Dominican Republic*

- Educational platform developed during the Hackathon for Rights to help schools identify students at risk of early dropout.
- Uses variables such as attendance, academic performance, behavior, grade repetition, and other relevant factors to support decisions by teachers, counselors, and administrators.
- Aims to strengthen student retention through case monitoring, early alerts, and support measures before the issue escalates.

DALIA | AI-Powered Intelligent Agenda | 2026 - Present | *Personal SaaS Product | iOS / Android / Web*

- Productivity product designed to convert disorganized thoughts, tasks, ideas, studies, payments, and worries into clear actions, priorities, dates, reminders, and plans.
- Includes an applied AI approach to real user language, with special attention to Dominican Spanish, informal phrases, ambiguity, emotional context, and automatic organization.
- Built with a freemium/pro vision, mobile integrations, authentication, subscriptions, notifications, calendar functionality, user modes, and an experience focused on mental clarity.
- Demonstrated capabilities: SaaS product, mobile, applied AI, UX, payments, App Store Connect/TestFlight, Google Play Console, Supabase, RevenueCat, and business vision.

TribunalIQ | LegalTech + AI | 2026 | *Personal Product | Legal Transcription and Analysis*

- LegalTech platform designed to support legal processes through hearing transcription, speaker diarization, content analysis, information comparison, and report generation.
- Integrates Python-based AI/ML services for audio processing, case analysis, and decision support in legal contexts.
- Demonstrated capabilities: full-stack architecture, audio processing, local models, AI APIs, case management, report automation, and privacy-oriented design.

Barber Sanx | SaaS for Barber Shops | 2026 | *Personal Product | Dominican Republic*

- SaaS platform for a barber shop in the Dominican Republic, designed to manage appointments, services, clients, and customer engagement tools.
- Aims to improve the client experience and reduce operational workload through automation, digital scheduling, and administrative management.

HandsMachines | Science Fair Project | 2026 | *Computer Vision / Accessibility*

- Interactive web application designed to reduce the communication gap between people with hearing disabilities and digital environments.
- Uses computer vision models to detect hand gestures through the device camera and translate the sign language alphabet into text in real time.
- Demonstrated capabilities: accessibility, applied AI, computer vision, camera-browser interaction, prototyping, and social-impact educational solutions.

CJ Informa | School Newspaper | 2025 | *Full-Stack School Newspaper | Hogar Infantil Corazon de Jesus*

- Full-stack school newspaper with authentication, user management, CRUD functionality for posts and comments, landing page, and an administration panel for content moderation.
- Created to communicate news, institutional information, and relevant content from the school, demonstrating the ability to build complete products with roles and administration.

EDUCATION, CERTIFICATIONS, AND CONTINUOUS LEARNING

Intensive Self-Directed Training in Software Development | **Udemy** | 2020 - Present

- Completed more than 100 certified courses from 2020 to 2026, starting with HTML, CSS, and JavaScript, and advancing toward React, backend, databases, APIs, deployment, mobile, AI, and data science.

- Learning path based on constant practice, personal projects, and real application of technologies in client systems and personal products.

Data Science, Machine Learning, and Artificial Intelligence | Coursera / Udemy | 2026 - Present

- Active training in data analysis, data science fundamentals, machine learning, applied AI, Python, Pandas, and the use of data for intelligent products.
- Upcoming academic goal: pursue a degree in Data Science Engineering and strengthen the connection between software, Big Data, analytics, and artificial intelligence.

Advanced Full-Stack Web Development | Talento Digital | 2026

- Advanced training in full-stack web development, focused on application building, frontend, backend, and development best practices.

C# / .NET Certification Path | Microsoft + freeCodeCamp | 2025

- Certification path focused on C#, .NET fundamentals, and development within the Microsoft ecosystem.

High School Education | Hogar Infantil Corazon de Jesus | Completed in 2026 | Santo Domingo Este

- Graduated with Academic Merit, receiving recognition for outstanding academic performance during high school.
- High school graduate with an early focus on technology, software development, digital products, and self-directed learning.

DOCUMENTED CERTIFICATION AND COURSE AREAS

- Frontend: HTML, CSS, JavaScript, React, Next.js, responsive UI, and modern web development.
- Backend: Node.js, Express, C#/.NET, ASP.NET, REST APIs, authentication, security, and service architecture.
- Databases: MongoDB, SQL Server, PostgreSQL, Prisma, queries, modeling, and persistence.
- Data & BI: Python, Pandas, data analysis, Power BI, Excel, SQL, R, Snowflake, and visualization fundamentals.
- AI & Machine Learning: ML fundamentals, data processing, automation, applied models, and APIs for intelligent services.
- Cloud / DevOps: AWS, Docker, deployment, Render, Vercel, version control, Git/GitHub, and environment configuration.
- Mobile & SaaS: React Native/Expo, mobile publishing, subscriptions, payments, and freemium/pro product flows.
- Cybersecurity: security fundamentals, authentication, access control, and best practices for web applications.
- Comprehensive training: 682-hour web and mobile application development diploma, complemented by specialized certified courses.

PROFESSIONAL COMPETENCIES

Product & Leadership	Engineering & Execution	Professional Mindset
• Project management • Product vision • Feature prioritization • Requirements gathering • Team coordination • Client/stakeholder communication • Decision-making under pressure	• Full-stack development • Backend architecture • API design • Data modeling • Administrative systems • Process automation • Payments and role integration	• Self-directed learner • Adaptability • Responsibility • Problem-solving • Fast learning • Strategic thinking • Results orientation

PROFESSIONAL GROWTH TIMELINE

2020 - Started learning web development with HTML, CSS, and JavaScript on Udemy.

2021 - 2023 - Expanded into modern frontend, React, advanced JavaScript, practical projects, and programming fundamentals.

2024 - Strengthened focus on backend, databases, Node.js, .NET, C#, APIs, and more complete systems.

2025 - Executed real projects: EduVisor, freelance clients, business platforms, and products used by real users.

2026 - Deepened knowledge in data science, machine learning, applied AI, SaaS products, mobile, subscriptions, and technology business strategy.

PROFESSIONAL OBJECTIVE

To continue growing as a full-stack developer and technical leader, with a strong focus on backend engineering, system architecture, SaaS products, Data Science, Big Data, and applied artificial intelligence. My goal is to create useful, scalable, and well-designed digital solutions where data and AI work as real tools to solve problems, improve decisions, and open new opportunities for technological development. I believe that data, research, and artificial intelligence can transform companies, institutions, and entire countries when they are applied with vision, responsibility, and execution.

LANGUAGES

- Spanish: Native.
- English: Intermediate, with technical focus for reading documentation, courses, tools, error messages, APIs, and development resources.
